

Testimonials

"I have been an avid snowmobile rider for the past 10 years. Traveled across the country to enjoy my passion. Throughout the years I've tried various types of helmets, heated shields, internal breathing masks, etc. I recently had the opportunity to test the **Fog Thief**. Much to my surprise, I enjoyed an entire day of riding in subzero temperatures without fogging up. It didn't matter if I was at a standstill or riding aggressively, my vision was clear throughout. Additionally, I felt my teeth were securely protected by the soft mouthpiece. Get one and try it yourself... you will be pleased."

"My name is Bill Schneider I have been a semipro off road dirt bike racer for the better part of 25 years. One of the biggest hazards of racing is when you overheat and fog up. My eyes are more important than winning any race and do not want to remove my goggles during a ride.

About eight years ago I took up the sport of snowmobiling and found this to be a bigger problem. I recently came across a product called "**Fog Thief**" which does eliminate the fogging up of my eye wear or helmet shield. The product also allows me to wear my favorite helmet. I highly endorse this product based on its performance, easy of use and affordability. I used it as recently as this past weekend in Pittsburg PA area where other helmets were fogging up while sitting still or moving and yet I had no problems again.

I do recommend this to any snowmobiler, motorcycle rider or anybody who engages in a helmet based sport or has ventilation issues. Never fog again..."

FOGTHIEF

*Removing Helmet Fog While
Providing a Clear View of Your
Sports Activities*

What is Fog Thief?

Fog Thief is a new brainchild of **FunProjex**. DOT has identified fogging helmets as a major problem for motorcycle accidents. **Fog Thief** is used to prevent the fogging of helmet visors, eyeglasses and sunglasses worn inside the helmet. Imagine riding your motorcycle or snowmobile and being able to see clearly! You can drive safely without lifting the visor of your helmet while underway.

Warm breath from the mouth is directed down to beneath the chin area and transports the air outside the helmet. Without the warm breath being trapped inside the helmet, your glasses and helmet shield are kept clear and fog free for safe riding.

Fog Thief Applications Include:

- All helmet-based sports
- Motor cycle, snowmobile and street bike riders
- Professionals within clean room environments
- ATV, UTV and dirt bike riders
- Drag race drivers to sky divers
- Addition to iron and spot welders face guard
- Football & hockey players with front plastic shield
- Great for paintball activities
- Hunters - prevents your scope from fogging up (all black version available soon)
